

ION* is unlike anything on the market, going beyond probiotics to support tight junction integrity and diversify your microbiome the natural way. This all-natural, tasteless liquid supplement, just ancient soil and purified water, provides the essential communication your microbiome needs to thrive.

The Power of ION*

The ION* product suite is founded on the principle of letting the intelligence of nature lead the way. The unique humic extract that is the backbone of our product line contains a family of bacterial metabolites (not bacteria but made by bacteria) called fulvate. At its core, the gift of **fulvate** lies in its ability to both give and take. This ability to donate and accept is how ION* works to perform at least four important functions:

- Antioxidant:** quenches free radicals
- Carrier:** transports vitamins and minerals into cells
- Chelator:** removes waste from cells
- Communication:** transfer of electrons (redox signaling)

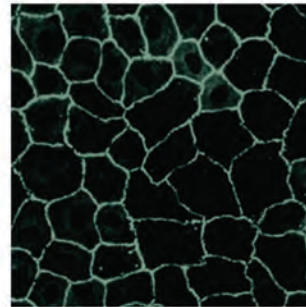

ION* vs Fulvic Acid

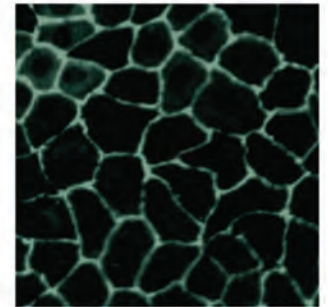

Scan the QR code to watch Zach Bush MD explain the difference between fulvic acid and fulvate

Designed by nature, proven by science

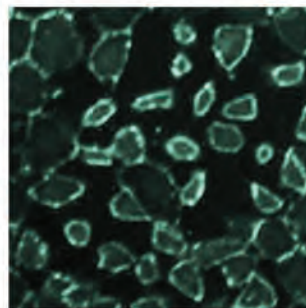

In third party peer-reviewed studies, ION* is proven to support tight junction integrity, even in the presence of toxins, such as glyphosate.

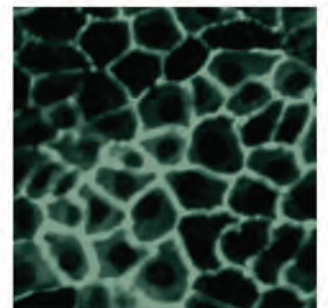

Normal gut lining

Gut lining supported with ION*

Gut lining compromised by glyphosate

Gut lining compromised by glyphosate, supported by ION*

Farmer's Footprint

ION* Intelligence of Nature is an innovator in microbiome health, pioneering foundational products backed by science and grounded in nature to protect you in a toxic world so you can thrive.

But we didn't stop with the microbiome...

Our mission is macro

Every time you purchase ION* products you are supporting a connected ecosystem working to regenerate human and planetary health.

Our founder and CEO, Zach Bush, MD, started Farmer's Footprint, a non-profit organization to unite, inspire, and accelerate the movement towards regenerative food systems as a means to restore human and planetary health. This work includes dedicated efforts to ban glyphosate and over 8,000 people have joined the Farmer's Footprint community to date.

Humanity's greatest challenges call for collaboration at every level. We are here to build relationships with people and organizations who share our vision to regenerate the planet's natural cycles of human health and ecology for generations to come.

Learn more about how our purpose-driven collective is working toward a regenerative and thriving future for both you and this beautiful Earth at **farmersfootprint.us**.
